ABSTRACT

The Hotel Revenue Management Dashboard is a visual analytics tool designed to centralize key metrics like ADR, RevPar, and occupancy rates. Because hotel pricing and bookings change daily, manual tracking is difficult and inefficient. This project solves that problem by using charts and graphs to make complex data easy to understand at a glance.

The system features a Forecast Display to compare expected vs. actual performance and a Channel Breakdown to track booking sources. It also provides pricing suggestions based on demand and allows users to filter data and export reports. By providing an admin panel to manage data, this project helps hotels make faster, data-driven decisions to increase revenue.

MODULE

MODULE 1: HOTEL DASHBOARD & KPI MONITORING

THIS MODULE IS DESIGNED TO PROVIDE A CENTRALIZED DASHBOARD FOR MONITORING OVERALL HOTEL PERFORMANCE. IT DISPLAYS IMPORTANT KEY PERFORMANCE INDICATORS SUCH AS ADR (AVERAGE DAILY RATE), REVPAR (REVENUE PER AVAILABLE ROOM), OCCUPANCY RATE, AND BOOKING PACE THROUGH KPI CARDS AND SUMMARY SECTIONS. THE DASHBOARD HELPS MANAGEMENT QUICKLY UNDERSTAND THE CURRENT BUSINESS STATUS AND OPERATIONAL PERFORMANCE IN REAL TIME.

MODULE 2: REVENUE TREND ANALYSIS & FORECASTING

THIS MODULE FOCUSES ON ANALYZING HOTEL REVENUE PERFORMANCE USING GRAPHICAL REPORTS AND FORECASTING METHODS. IT PROVIDES DETAILED INSIGHTS INTO REVENUE GROWTH, OCCUPANCY TRENDS, AND FUTURE BUSINESS PREDICTIONS BASED ON HISTORICAL DATA. BY USING CHARTS AND TREND ANALYSIS, THE MODULE SUPPORTS BETTER FINANCIAL PLANNING AND STRATEGIC DECISION-MAKING FOR HOTEL MANAGEMENT.

MODULE 3: BOOKING CHANNEL & DATA INTEGRATION

THIS MODULE MANAGES BOOKING INFORMATION COLLECTED FROM DIFFERENT BOOKING CHANNELS SUCH AS ONLINE TRAVEL PLATFORMS AND DIRECT HOTEL BOOKINGS. IT INCLUDES FEATURES LIKE CHANNEL-WISE BOOKING ANALYSIS, DATE-BASED FILTERING, AND REAL-TIME DATA SYNCHRONIZATION THROUGH API INTEGRATION. THE MODULE IMPROVES BOOKING MANAGEMENT EFFICIENCY AND ENSURES ACCURATE DATA HANDLING ACROSS PLATFORMS.

MODULE 4: PRICING STRATEGY & ADMINISTRATIVE CONTROL

THIS MODULE HANDLES DYNAMIC PRICING STRATEGIES BY ANALYZING HOTEL DEMAND, OCCUPANCY LEVELS, AND REVENUE PERFORMANCE TO SUGGEST OPTIMAL ROOM PRICING. IT ALSO PROVIDES ADMINISTRATIVE FUNCTIONALITIES SUCH AS USER MANAGEMENT, REPORT GENERATION, SYSTEM SETTINGS CONTROL, AND EXPORT OPTIONS FOR MAINTAINING OPERATIONAL RECORDS AND IMPROVING MANAGEMENT EFFICIENCY.

PROBLEM STATEMENT

Hotel managers currently face significant challenges tracking daily fluctuations in room prices and bookings. Relying on manual processes is difficult, time-consuming, and prone to errors. Without a centralized tool, it is hard to monitor critical metrics like ADR, RevPAR, and occupancy rates simultaneously. Additionally, managers lack a streamlined way to compare forecasted versus actual data or identify which booking channels are most profitable. This lack of real-time visibility prevents data-driven pricing and leads to lost revenue opportunities.
